Arizon's MARCRAFT® Division introduces a cost-effective solution for cleaner air
MARCRAFT's Energy Recovery Unit conserves natural resources and reduces building operating costs

St. Louis MO--MARCRAFT® Custom Air Handling Systems, a division of Arizon Companies, recently added an Energy Recovery Unit to its product offerings. The MARCRAFT Energy Recovery Unit uses exhaust air from a given space that contains heating or cooling energy to condition a source of outside air. Utilizing this exhaust energy lessens the overall building consumption of energy, therefore reducing building operating costs as well as conserving natural resources.

Commercial buildings account for one-third of our nation's total energy consumption as well as two-thirds of our nation's total electrical consumption. Utilizing a MARCRAFT Energy Recovery Unit will help to reduce this massive expenditure of energy by recovering up to 85% or more of exhausted energy.

The design of MARCRAFT Energy Recovery Products can be custom manufactured to optimize any application or requirement.

A recent report from the Occupation Safety and Health Administration said that the average American spends 90% of their day inside. Since fresh or outside air has a positive effect on an individual's overall health, mood and productivity, it becomes increasingly more important to focus on improving the quality of air inside our buildings by "bringing fresh air in". A MARCRAFT Energy Recovery Unit provides an economical solution to increasing ventilation without dramatically increasing the mechanical equipment cost, space requirements and operational cost.

MARCRAFT is committed to improving indoor air quality in the most cost-effective way. Whether new construction, renovation, rehab, or simply the need to retrofit your existing system to save energy, MARCRAFT will provide a Total Solution™ for your project.

MARCRAFT Custom Air Handlers are available with unlimited capacities, custom configurations, factory controls, wiring, and piping, with capability for factory testing for leakage, deflection, airflow and sound. MARCRAFT's team of experienced engineers work with end users, contractors and other engineers to solve the most unique HVAC challenges. See www.arizoncompanies.com.

About Arizon Companies

Arizon® Companies manufacture and install three unique, industry-leading product lines: Johnson Air Rotation® and Make-Up Air Systems, MarCraft® Custom Air Handling Systems and Arizon® Air, Frame and Tension Structures. To learn more about Arizon Companies—or any of its product lines—visit www.arizoncompanies.com or call Barbara Scheer in our St. Louis, Mo., office at (800) 325-1303.
