Arizon Companies announces release of new energy saving product

Arizon's UV Bio-CLEENTM System delivers dramatic improvements in HVAC system efficiencies

Arizon Companies recently announced the addition of a UV coil irradiation system to their current line of products. The UV **Bio-CLEENTM System** is the most economical way to eliminate and stop buildup of organic materials from HVAC evaporator coils, drain pans, and downstream filters, which are common sources of contaminants distributed throughout any facility.

Using Arizon's **Bio-CLEENTM System** to keep coils and drain pans clean avoids the expensive chemicals and laborious coil cleaning actions required today. The **Bio-CLEENTM System** will eliminate and prevent fungus, mold and bacteria buildup on the coils and drain pans, thereby increasing airflow and heat transfer.

"The energy savings you realize when using the **Bio-CLEENTM System** are significant," said Doug Howery, MarCraft Division Manager. "Typically, a customer will realize significant energy savings by keeping coils free from dirt and debris," Howery reported. "Also, investing in the **Bio-CLEENTM System** returns and maintains your existing HVAC system to like-new design condition in most instances."

The UV coil irradiation system is available in all Arizon products. All divisions of Arizon Companies, including MarCraft Custom Air Handling®, Johnson Air Rotation®, and Arizon® Structures specialize in large commercial and industrial building projects for hospitals, research labs, government and military facilities, medical centers, manufacturing facilities, distribution centers and warehouses, grain and storage facilities, arenas, exposition facilities, convention centers, sports and athletic facilities, and many other specialty structures. See website at www.arizoncompanies.com.

About Arizon Companies

Arizon® Companies manufacture and install three unique, industry-leading product lines: Johnson Air Rotation® and Make-Up Air Systems, MarCraft Custom Air Handling Systems® and Arizon® Air, Frame and Tension Structures.
