***Arizon Companies' Marcraft Division completes plant efficiency program***

**Efficiency program in HVAC plant yields multiple benefits including cost savings to customers**

*St. Louis, MO*--MarCraft Custom Air Handling Systems, a division of Arizon Companies, recently conducted an efficiency program in their main manufacturing plant in St. Louis, Missouri. The program was multi-faceted and included extensive material and equipment audits, data analyses, streamlining processes, and investing in state-of-the-art tools and equipment.

The program took several months and involved all Marcraft engineers, managers, production leads, and assembly personnel. Results of the program include increased throughput capabilities in the Marcraft plant, greater efficiencies in all levels of production, detailed accuracy in raw material use, and reduction in overall time-to-market.

“With our solid backlog and our recent investment in new machinery, we are able to realize greater efficiencies in our production process, allowing us to pass these cost savings on to our customers,” said Marcraft Division Manager, Doug Howery. Since 1976, Marcraft has been designing and building custom HVAC units for everything from schools to hospitals to airports. Marcraft specializes in “clean sheet” designs that fit all special applications and project requirements. See [www.arizoncompanies.com](http://www.arizoncompanies.com)

*About Arizon Companies*

Arizon® Companies manufacture and install three unique, industry-leading product lines: Johnson Air Rotation® and Make-up Air Systems, MarCraft® Custom Air Handling Systems and Arizon® Air, Frame and Tension Structures.
